 Black titanium ring is actually a titanium-zirconium alloy ring,Titanium is considered much more robust, durable and insensitive, which makes it an attractive companion for all couples of today. Titanium is known for its high strength, low density, corrosion resistance, and biocompatibility, while zirconium is favored for its good thermal stability and corrosion resistance. Combining these two metals can significantly improve the overall performance of the material. Black Titanium rings are made of 51% Zirconium and 49% Titanium.Like the black zirconium ring, the black colour of black titanium ring is created by the heating process and not by coating , but the color is darker and more stable than the black zirconium ring.
