The manufacture of modern Damascus steel greatly saves labor and costs. Forging and welding are used to stack steels with different carbon contents for heating, folding and forging until they are integrated, so it is also called pattern welded steel. Damascus steel made by folding and forging technology has more obvious pattern characteristics. This kind of pattern may be hidden or visible, and some of it can be revealed during forging, but under normal circumstances, it must be corroded by acid to appear.

In addition to beautiful patterns, Damascus steel also has excellent durability and strong toughness. This unique combination of properties makes Damascus steel the perfect alloy for rings.

How to make Damascus

Step.1

The original steel is pressed and stacked one by one, welded into a whole piece, and then forged at high temperature.

Step.2

After being smelted into thin sheets, they are folded, twisted and pressed, and then forged again.

Step.3

Such repeated folding and forging , greatly improved the toughness of the steel.

Aluminun can be plated in different colors, just send us color plate, we can make the color according to the color plate.
